ABOUT ME...

My name is Melissa, countryside dweller and labrador mum. When I am not in my wellies you'll find me at my computer designing websites and debugging projects. I am passionate about the full product journey and love creatively brainstorming solutions for businesses and problem solving.

EXPERIENCE

I recently completed an intense 16 week bootcamp with the school of code. The School of code was an immesrsive and collaborative environment, where we worked in small groups to master technical skills and build problem solving projects based on these specific skills. Through these diverse team projects, I honed skills in **problem-solving**, **communication**, and **creative ideation**. **Daily stand-ups** and **weekly presentations** refined my abilities to articulate complex concepts concisely—an invaluable asset in any tech-driven environment.

I have a passion for creating **functional, accesible** and beautiful looking webdesigns, blending aesthetics and functionality.

I love to learn and grow and embrace new challenges including studying a **Cyber Security** degree, an important part of technology I wish to learn about to safeguard the digital future, I believe in not just coding for the present, but also ensuring a secure and resilient digital landscape for tomorrow.

PROPERTY MANAGER
Boots Head office, Nottigham

Transitioning to the head office, I embraced a new team dynamic, collaborating across departments like supply chain and marketing. Sharing workloads, I learned project ownership and the agility to adapt swiftly to changes—skills directly applicable to **agile** software development. This experience laid the foundation for seamlessly integrating into cross-functional tech projects, emphasizing **adaptability** and **collaboratation**

PHARMACY TECHNICIAN
Boots, Retail Stores.

Using **attention to detail** to dispense patients prescriptions, solve patient queries with **logic** and discretion.
Understanding of **GDPR**
Attention to detail, noticing minor mistakes that now make me great at **debugging** and **accuracy**. Patients are always at the heart of the pharmacy and this is something that I can now take foward into centering projects around **user experience**.
